

Campsite

Getting ready to stop for the night

Picking a location

1. Space

Check for a location that you are with 10m of the power access point and are level

2. Access to power

Before setting up camp check the cable can reach the access point

The blue connector is under the van just in front of the drivers rear left wheel.

Connect to the van and then walk and connect to the campsite outlet

3. **Parking on chocks**

This can be hard due to the weight the van.

1. Get the chocks from the boot on the left hand side

2. Put the chocks under the front wheels

3. Slowly drive up until level or on the top step
4. Use the foot brake and then pull the handbrake up fully
5. Leave in gear before releasing the foot brake.

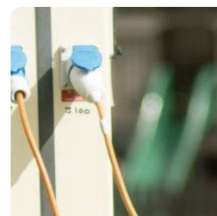

Power Inputs

1. Solar

The van has solar panels to keep the leisure battery charged

This is usually enough for the fridge and charging of phones unless there is a lack of sun exposure or a high power consumption

2. Hook Up At Campsite

- A hookup cable is provided in a blue bag in the boot next to the gas safety box
- The hookup point on the van is under the side of the van just in front of the drivers side back wheel

3. Hook Up With UK Plug

You may also hook up to a UK plug socket using the adaptor in the same bag

4. Hook Up Overseas

- If traveling overseas you may need to reverse the polarity of the power at a campsite
- This means adding the reverse polarity cable in between the van socket and the usual cable

- To know if you need the reverse polarity you can use the red polarity sensor plugged into the multi cable inside the van. It should read 3 green lights and if not do what it says by adapting the reverse polarity cable

Water

1. Water and Waste Tanks

In the cupboard beneath the sink are the water tanks There are two tanks one for clean water and one for waste water

See the [Dining](#) page for more about these

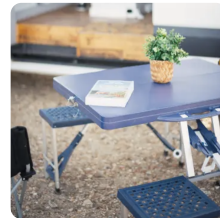

Dining

1. Chairs

There are 2 dining camp chairs in the boot plus a pop up children camping table

2. Table

The table is opened on the ground and then the two sides pull out and are locked into place before turning the whole thing over and onto its legs

Shade

1. **Awning**

You can attach the awning to the side of van to create shade

1. Slide the awning into the awning rail above the van side door.
2. This may be easier with someone to help hold a guy rope

3. Next connect the poles together
4. Put the pointed end of the poles through the awning hoops.
5. Then attach a guy rope over the end of the point
6. Finally put the pole on the ground and pull the guy rope out to hold the awning in place.
7. Find something to tie up the guy rope, or peg into the ground

If very windy you will not be able to use the awning
